

Innovator for Business Analysts SAP Solution Manager Plug-In

You want to redocument your SAP Solution Manager business processes quickly in Innovator for Business Analysts.

- You can use the *Innovator for Business Analysts* SAP Solution Manager plug-in to create fully-automated SAP Solution Manager processes in Innovator.

You want to better understand your end-to-end processes from the SAP solution manager.

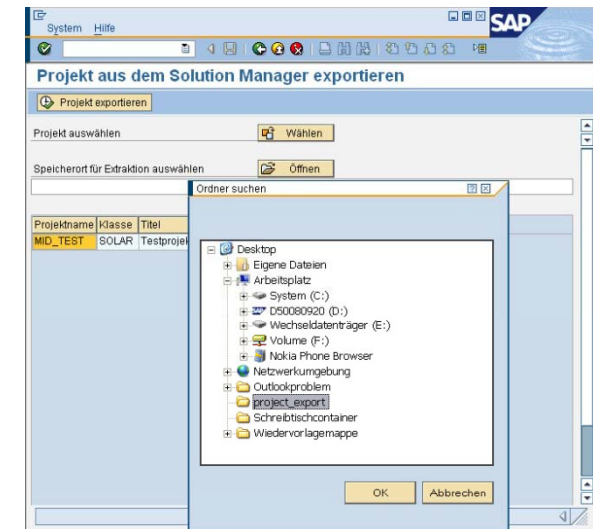

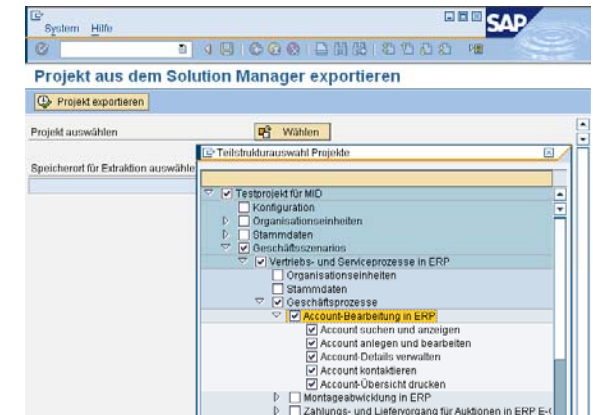

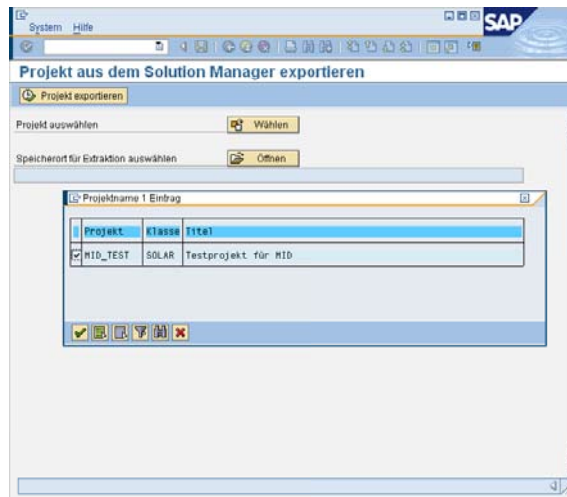

- You can use the *Innovator for Business Analysts* SAP Solution Manager plug-in to graphically show SAP Solution Manager end-to-end processes as BPMN 2.0 models.

You want to how similar your individual processes are to the SAP best practice processes.

- You can use the *Innovator for Business Analysts* SAP Solution Manager plug-in to visualize SAP Solution Manager best practice processes from the SAP Business Process Repository (SAP BPR) into Innovator and compare them with processes you have created yourself.

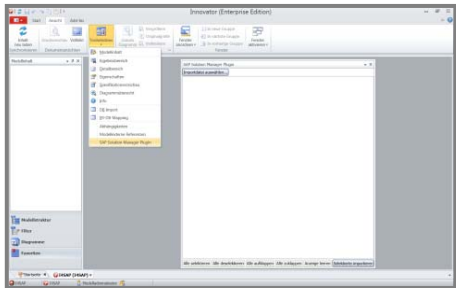

Exporting Projects from the SAP Solution Manager System

Use the export function provided by SNP AG for exporting SAP Solution Manager projects. Export the relevant SAP Solution Manager projects and their process structure from the SAP Solution Manager. Put these exported projects in a file for subsequent import in Innovator; see figure below.

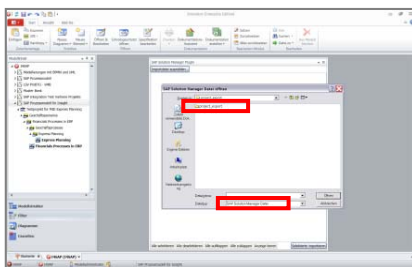

Importing from SAP Solution Manager to Innovator for Business Analysts

Start the SAP Solution Manager plug-in for the import as an *Innovator for Business Analysts* tool window.

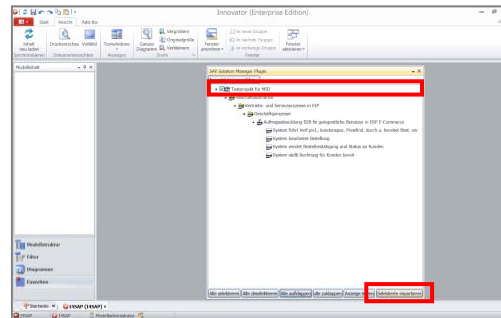

Select **"Select import file..."** in *Innovator for Business Analysts*; a selection of SAP Solution Manager projects which contains the complete process hierarchy then appears.

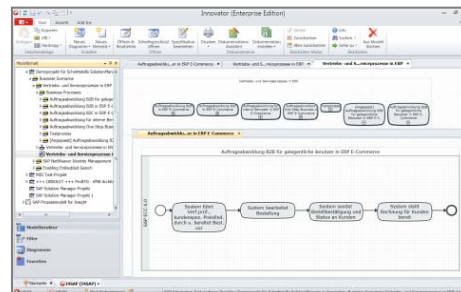

Open an SAP Solution Manager file. The plug-in shows the projects contained and icons give you information about target objects in the Innovator BPMN 2.0 model.

Select one or more projects to be imported from the topmost level and the desired system model; start the import with *Import Selection*.

A model with a special SAP Solution Manager profile is initialized when business processes are imported from the SAP Solution Manager; this is done so that Innovator can automatically recognize what sort of an SAP Solution Manager project element it is. Innovator then creates the respective BPMN 2.0 elements and automatically displays them in process diagrams. Scenarios are shown in process maps and business processes are shown in conventional BPMN process flows.
