INNOVATOR 11 R4

Your Model Success

Success is Made up of Many Aspects - But Only One Model

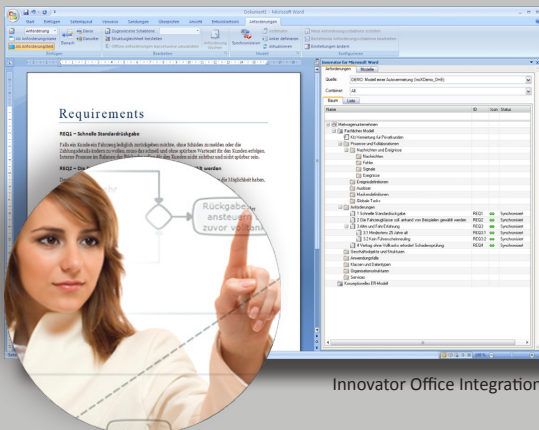

The new Innovator 11 R4 enables easier inclusion of requirements, improved traceability with regard to changes made and optimized integration of your business processes in IT. With a multitude of new features, active support of team work and a modern GUI, Innovator 11 R4 and its modules are now more powerful than ever before.

Work Towards Success of Your Models - With the New Innovator 11 R4!

OFFICE INTEGRATION

Innovator Office Integration

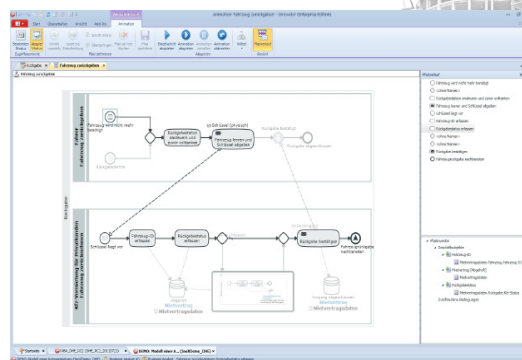

Including Requirements

Innovator Office Integration makes it child's play to create and edit requirements. You can use Innovator 11 R4 to transfer requirements created in Microsoft Word into the central model. As is the case with requirements analysis, changes need to be made to the document; these changes are then shown in the original document. Innovator is the first tool whose requirements elicitation can be transferred from text descriptions of requirements directly into business process modeling or IT models.

Animating Processes

Innovator 11 R4 enables dynamics to be visualized. Concrete flows in nested processes and interfaces can be dynamically shown in Innovator using the new animator. Animating processes leads to a better understanding of relationships and means that dimensions of relationships can be intuitively created.

MORE NEW FEATURES

- Color and shape options
- Model validation
- Smart icons for showing additional information
- Versions of containers in the server with display in model tree
- Model comparison and merge tool integrated into the Innovator GUI
- Context sensitive online help
- Extended user management system: model administration
- Extended rights system: filtering contents according to access rights
- Optimizing performance and usability

MID - The Modeling Company

The focus of the MID team lies in the central model as a reference for extensive processes within the company and large projects in IT. Top German companies and authorities trust in Innovator, support from MID - The Modeling Company and its expertise. More than 100 specialists implement the vision of effectively realizing IT systems using concrete requirements for processes and products; and all this with more than 30 years of experience.

Processes are created using the BPMN 2.0 or UML 2 standard notations and can be seamlessly transferred into UML or ERM software models. The aim is to develop or generate executable code. Model success is ensured by the honed rights and role concept for all stakeholders, transparent collaboration and powerful functions.
