Areas of Responsibility

Aim: develop the skills needed to become an expert in data and process modeling in BI/DWH projects step-by-step. Continuously broaden your skill set as part of a successful consulting team and work towards being able to provide integral customer support. In detail:

• Start as a BI consultant and gain the best possible start in your working career during a 6 month trainee program

• You will work through 3 blocks to be trained in the areas of methods & tools, configuration & plug-ins and then put everything you have learned into practice in the 3rd customer-specific block

• Work together with other trainees and take on responsibility for independent project tasks, generating your first contact with customers

• Seminars and training courses will also help you to broaden your knowledge and soft skills

• An experienced mentor will be at your side throughout the whole process

Preferred Qualifications

• Degree in business information technology or computer sciences or similar

• Practical experience in the form of traineeships and/or projects - preferably in the area of business intelligence

• Sound knowledge of UML and/or BPMN

• Ideally, knowledge of data modeling

• Motivation, good communication skills, analytical thinking, confident with customer contact and ability to work independently

• Willingness to travel, flexibility

• Excellent German and English, both in spoken and written form
